1. Create a branch from the develop

```
rajan.marvaniya@SF-CPU-533 MINGW64 ~/git-exercise (develop)
$ git branch
* develop
  master
  task1
```

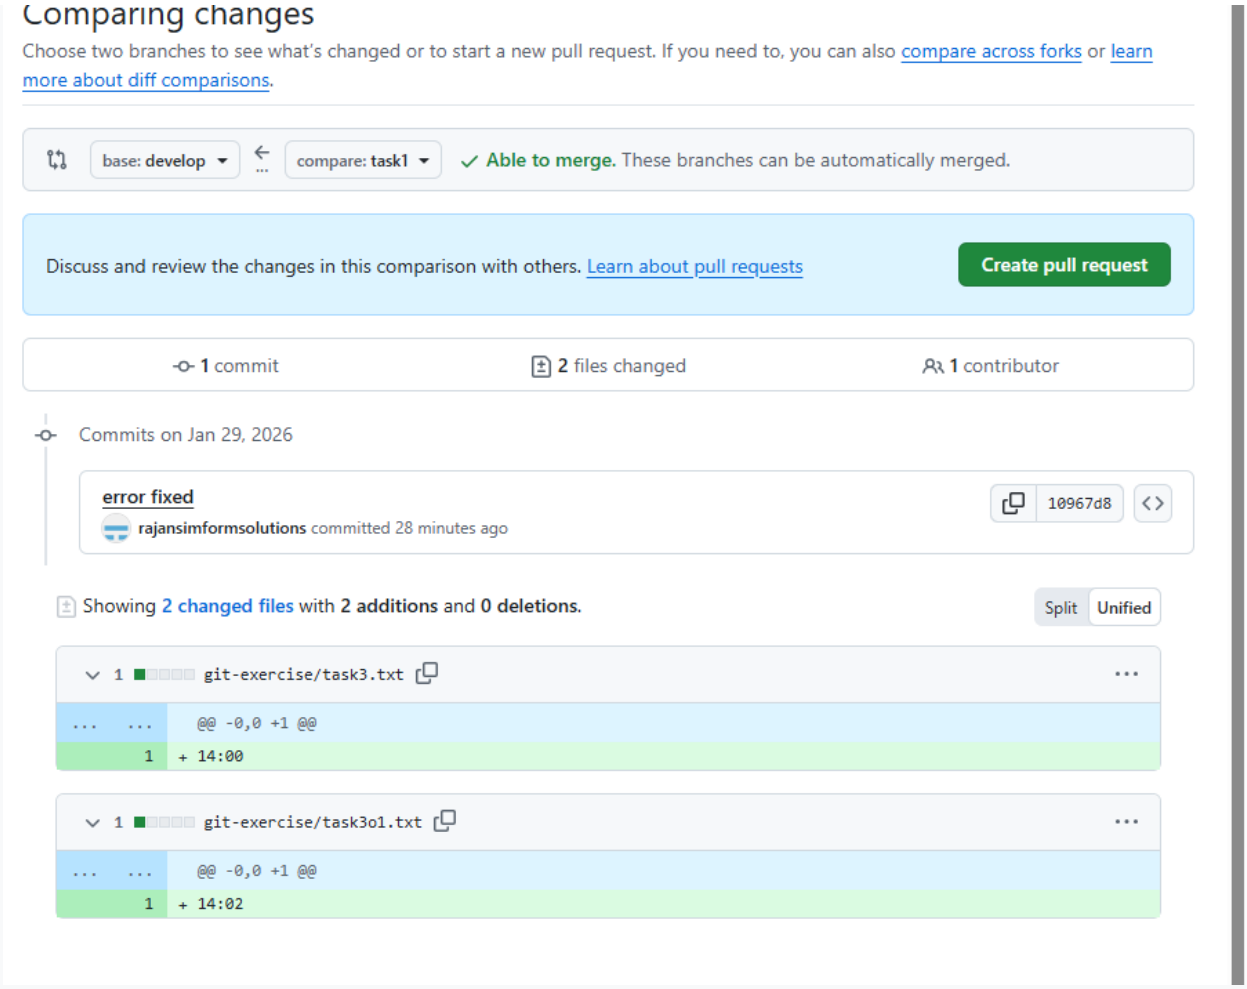
2. Add a commit message hook to the repo.

   - Don’t know about this command

3. Perform multiple commits in the new branch

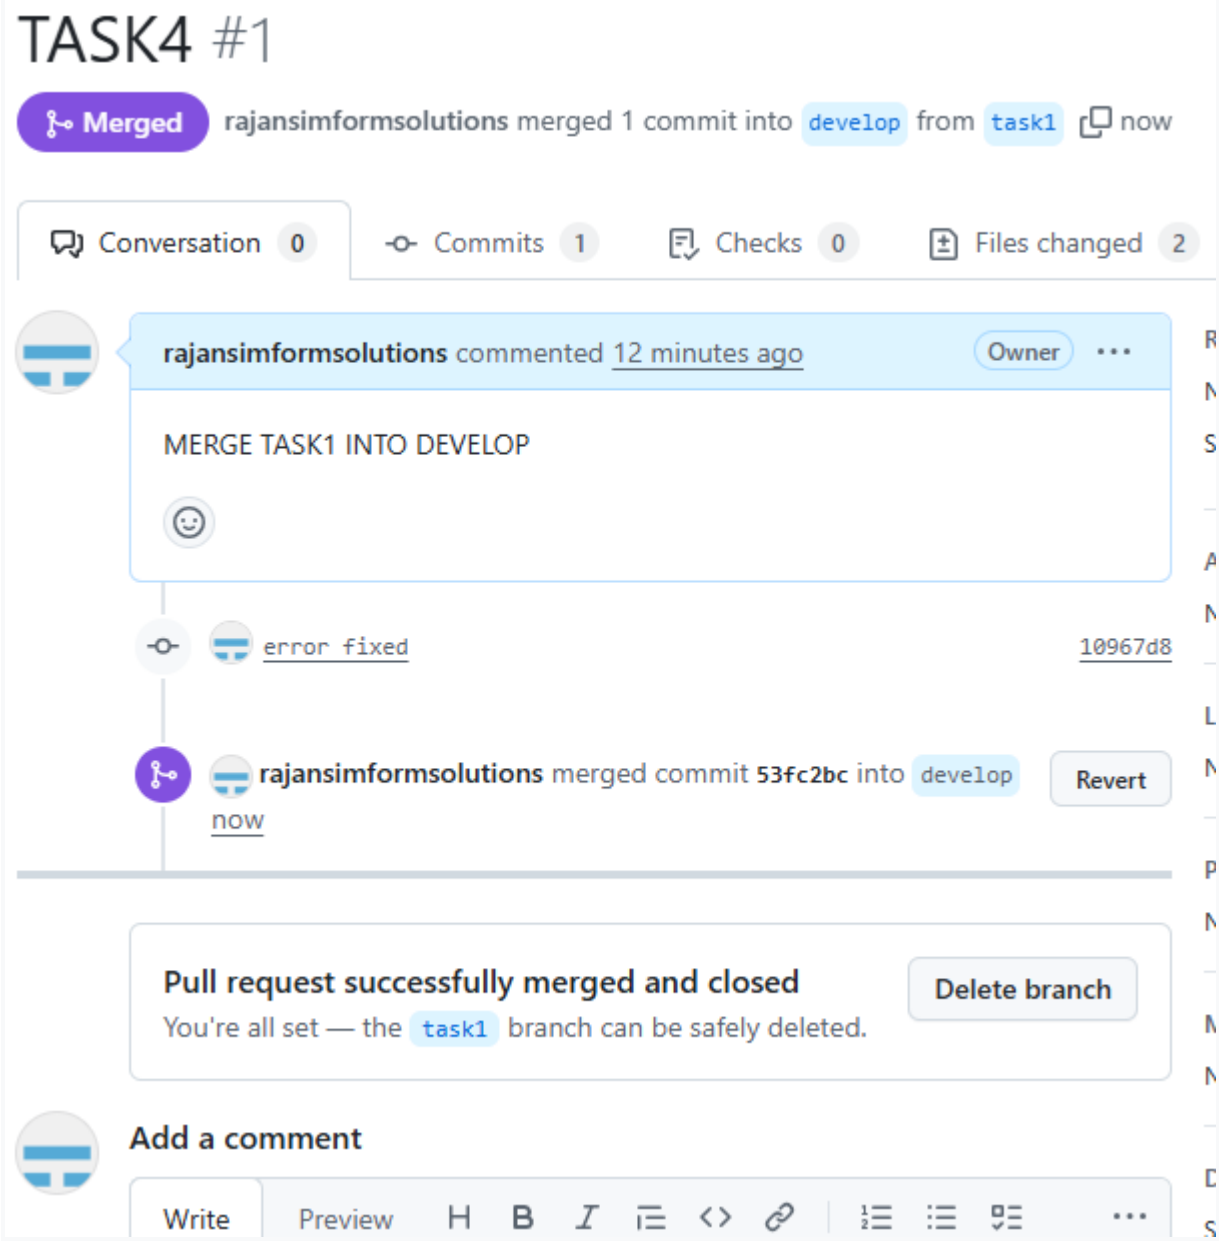
```
rajan.marvaniya@SF-CPU-533 MINGW64 ~/git-exercise (task1)
$ git push origin -f task1
Enumerating objects: 6, done.
Counting objects: 100% (6/6), done.
Delta compression using up to 8 threads
Compressing objects: 100% (2/2), done.
Writing objects: 100% (5/5), 347 bytes | 347.00 KiB/s, done.
Total 5 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To https://github.com/rajansimformsolutions/git-exercise
 + 340974d...10967d8 task1 -> task1 (forced update)
```

4. Create PR to develop.



5. PR should be small in size, It's recommended to do one commit per PR. However, based on the situation we can have multiple commits in PR. e.g. if someone is doing 10 bug fixes which are one-liner fixes in such cases instead of 10 different PRs you can do 10 commits in a single PR.

6. Create another branch from develop given your previous PR is still in review state

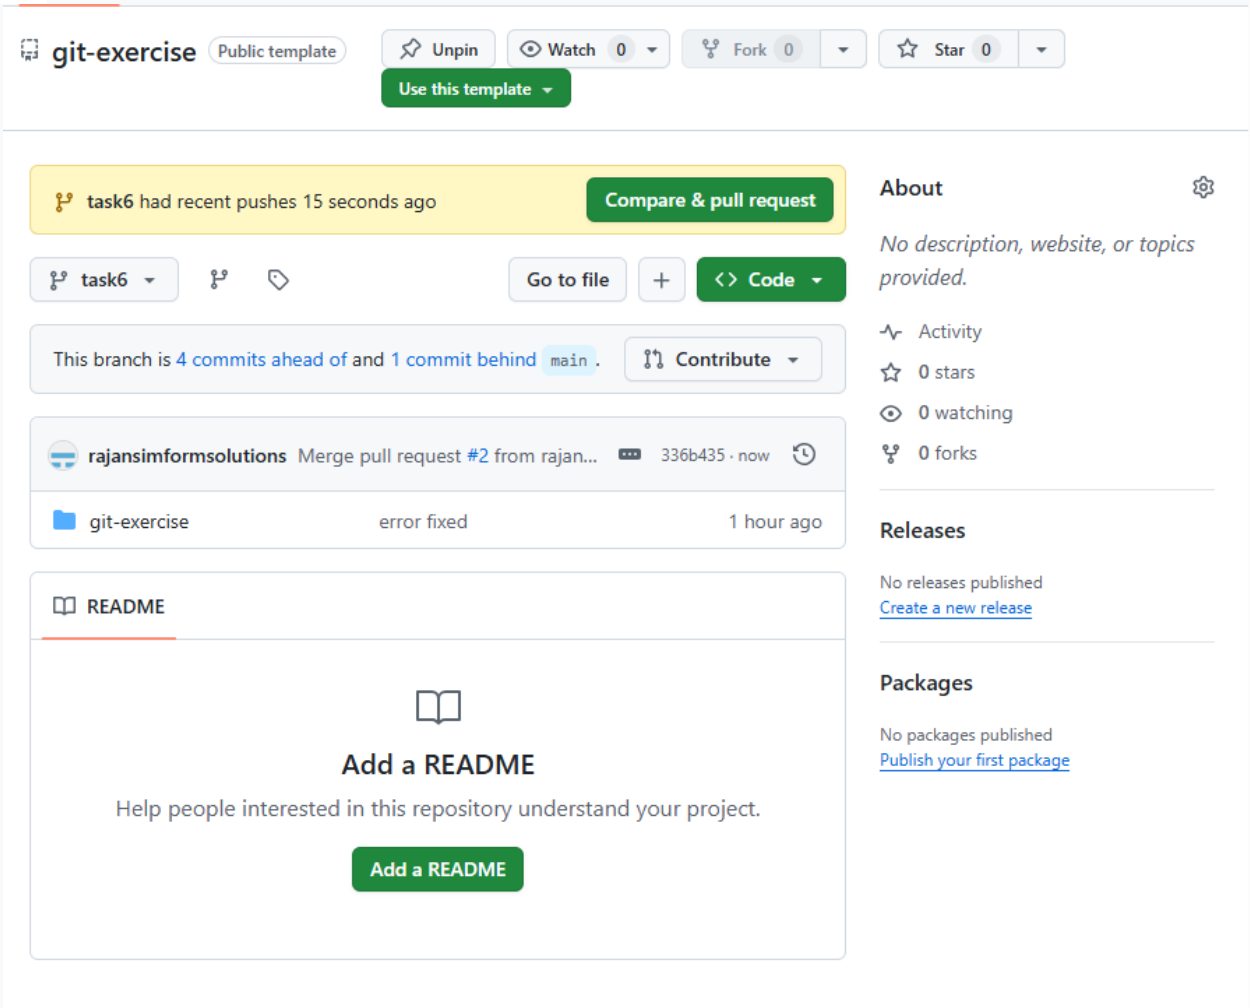


7. Now commit something in your current branch and push it

```
rajan.marvaniya@SF-CPU-533 MINGW64 ~/git-exercise (task6)
$ git push origin task6
Total 0 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
remote:
remote: Create a pull request for 'task6' on GitHub by visiting:
remote:      https://github.com/rajansimformsolutions/git-exercise/pull/new/task6
remote:
To https://github.com/rajansimformsolutions/git-exercise
 * [new branch]      task6 -> task6
```

8. In the meantime, your previous PR has been merged to develop

9. Create a PR for the current branch given your branch should be up to date with develop branch



10. For any new build release add a version tag to that specific commit to keep track of each version.
