

e) Calculate & all function

Create a new measure named All Returns to calculate the total number of returns, regardless of filter context

```
1 All Returns =  
2 CALCULATE (  
3 SUM('AdventureWorks Returns Data'[ReturnQuantity]),  
4 ALL('AdventureWorks Returns Data')  
5 )
```

Month	total Returns	All Returns
January	170	1828
February	166	1828
March	177	1828
April	183	1828
May	190	1828
June	179	1828
July	48	1828
August	126	1828
September	124	1828
October	148	1828
November	141	1828
December	176	1828
Total	1828	1828

Create a new measure named % of All Returns that divides Total Returns by All Returns

```
1 % of All Returns =  
2 DIVIDE(  
3 [Total Returns],  
4 [All Returns],  
5 0  
6 )
```

CategoryName

total Returns	All Returns	% of All Returns
1130	1828	0.62

Create a matrix to show % of All Returns (values) by product Category Name (rows).

CategoryName	% of All Returns
Accessories	0.62
Bikes	0.23
Clothing	0.15
Total	1.00

Which category accounts for the largest percentage of returns? The smallest?
